

Global Clinical Development Services

We Support Clinical Development with Global Standards in Asia

Since 1999, we have been the first Japanese CRO to establish a subsidiary in China and the region and have started to provide clinical development services. EPS International Co., Ltd was established in 2007 and EPS China Co., Ltd was established in 2008 to enhance our global clinical development business.

Through partnership with leading global CROs based in Europe and in the U.S, we support Asian-studies and Global-studies with high quality standards in a cost-effective way.

We also provide consultations for overseas bio-venture companies to support product launch in Japan.

Expertise

● Regulatory Expertise

We are able to manage overall project schedules from drug development to product launch to meet all regulatory requirements in various countries in Asia.

● Relationship Expertise

We've been building up strong relationship with key influence investigators and a trial site network in Asian countries. We highly appreciate personal relationships and effectively manage clinical trial operations.

● Team Expertise

We have professionals with vast experience in managing Global-Japan and Global-Asian studies coupled with well-versed knowledge in overseas circumstances. We are able to provide a full range of services to meet both local and global standards.

● Resource Expertise

By utilizing the clinical trial management platform of EPS group, we are able to provide multi-services to help research and development of pharmaceuticals and medical devices and launch the products in worldwide markets.
