- 📄 Form Creation/CSV
- ♻️ Automatic Data Upload

### General Support

- 📁 Test Environment Settings
- ✉️ Inquiry Correspondence
- 👤 User/Access Management

### Clinical Laboratory Test Values Transition Chart

AE/CM Timeline Comparison Table

Subject Progress

### Do you want to review data efficiently?

#### Visually comprehend abundant information through data visualization

A more intuitive apprehension of data is made possible by exploiting the data visualization feature, something that cannot be achieved with conventional listing forms.

It is also easier to confirm consistency by visualizing the worsening trend of the primary disease and the timing of the disease across multiple forms, thus improving the quality of data review, and reducing man-hours.

### Do you want to use it only for the duration of the study?

#### Available for the desired duration and number of users

If you sign a contract directly with Tableau, you will be required to pay an annual license fee. By choosing the EPS cloud environment, you can make contracts in a monthly basis.

In addition, you won't have to manage the server at your company, which can significantly reduce the operation and maintenance costs.

### Do you want to keep up to date on the operation status?

#### Get the latest data by automatic data upload

Reflecting CRF data on forms every day is a burden. Using Tableau Bridge, we work on your behalf getting CRF data and automatically upload it to the cloud. Your company can confirm the latest data by simply accessing Tableau Online.

※Studies using Medidata Rave and DATATRAK ONE are eligible for this service.

We propose the most suitable operation method based on the data used.
